

ENVIROBRICKS

ARE SAFE FOR ALL YOUR WOOD HEATING NEEDS:

STOVES

FIREPLACES

CAMPING

COOKING

OUTDOOR LIVING

LIGHTING INSTRUCTIONS

Step 1: Place two EnviroBricks parallel, roughly an inch apart.

Step 2: Place a firestarter between the bricks.

Step 3: Place two more EnviroBricks across the top, leaving a small gap between the two top bricks and carefully light the firestarter.

CAUTION! EnviroBricks are an extremely dry, 100% hardwood product. For home heating, use only in a well maintained stove or fireplace and control air flow to prevent overheating and extend burn times. EnviroBricks expand slightly when burning. Do not pack too closely to glass or top. **DO NOT OVERFILL!** Store only in a dry environment.

ENVIROBRICK

Your environmentally responsible, economical solution for all your wood heating needs.

- EnviroBricks are additive free, kiln-dried, compressed hardwood bricks used for home heating fuel in wood burning stoves, wood burning fireplaces, outdoor firepits, camping and cooking.
- Easy, clean storage with no bugs and less debris.
- Burns hotter, longer and creates less smoke, ash and creosote than cordwood.
- BTUs of 1-42"x48"x34" skid EnviroBricks compare to BTUs of 1-48"x48"x96" cord of well seasoned fire wood.

ENVIROBRICK

EnviroBrick heating fuel is an effective alternative to other fuels such as fuel oil and coal. Unlike fossil fuels that extract CO₂ from the ground and deposit it into the atmosphere when burnt, EnviroBricks are considered CO₂ neutral because the trees from which they are manufactured extract more CO₂ from the atmosphere than the bricks emit when burnt. EnviroBricks produce approximately 52% less particulate matter into the atmosphere than cordwood.

EnviroBricks are **twice the density** of cordwood and about the same energy density as coal.

EnviroBricks are a **consistent size** for easier storage than cordwood. One ton of EnviroBricks = one cord of wood. One ton of EnviroBricks = one 42"x48"x34" skid. One cord of wood = 48"x48"x96" of storage space.

EnviroBricks take half the storage space but supply longer burning times due to density and optimized stove fill.

EnviroBricks are manufactured from **100% kiln dried hardwood lumber sawdust** and compressed with 24,000 lbs pressure making them twice as dense as cordwood.

EnviroBricks **burn twice as clean** as cordwood leaving less than ¼ as much ash waste as cordwood.

EnviroBricks are sized equally and fit into wood burning stoves much better than cordwood.

EnviroBricks are your wood heating solution to bugs, dirt, and storage problems. Made only from hardwood scrap and sawdust, they are more environmentally friendly as wood burning stove fuel than cordwood or fossil fuels.

EnviroBricks burn longer than the same weight firewood logs.

32 lbs. **ENVIROBRICK** compared to 32 lbs of well seasoned (<15% moisture) cordwood
